Final

Details of the Pictures you Took

- What are these images of?
 - The subject is my wife riding her horse Rebel. She is demonstrating the five phases that a horse goes through while jumping.

Phase 5: The getaway

Final Image

The final image is a composite overlay of all the phases together. This was to achieve the goal of being able to see all the phases together.

It was created using the GNU Image Manipulation Program (GIMP). In order to maintain the opacity, I 'cut out' the subject and added them together as layers.

What was the motivation/goal?

- My wife rides horses and she wanted to better see how her horse moves. I thought this was a neat way to do something nice for her and cool for class.

How did you generate the final?

- I used the GNU Image Manipulation Program (GIMP). I started by loading the pictures in as separate layers. Then, I removed the background from all but one of the images to create the nice overlay. Finally, I had to order the layers properly to get the proper visuals.

Was it successful?

My wife has been saying how cool it looks, so I would say it was successful.

What would you do differently?

I could have been more careful with how I 'cut out' the subjects. Moving closer to the subject could have provided a better view as well.
